Subject: Submission of Manuscript: “Demurrage-Based Monetary Circulation in Permissioned Financial Market Infrastructure: A Gesell-Inspired Approach to Settlement Efficiency”

Dear Editor-in-Chief,

I am pleased to submit our manuscript entitled “Demurrage-Based Monetary Circulation in Permissioned Financial Market Infrastructure: A Gesell-Inspired Approach to Settlement Efficiency” for consideration for publication in the Journal of Financial Market Infrastructures.

This paper presents a novel integration of Silvio Gesell’s demurrage-based currency theory with contemporary distributed ledger technology for regulated financial market infrastructure. We propose a dynamic demurrage mechanism for permissioned settlement systems that prevents the pathological accumulation of token value while maintaining network efficiency. Through formal analysis and simulation, we demonstrate that time-decay of idle holdings naturally incentivizes productive participation, dynamic demurrage rates scale with network inactivity creating adaptive disinflation, and Byzantine-resistant verification protects the system against malicious actors.

Our work is particularly relevant to the Journal of Financial Market Infrastructures as it addresses fundamental challenges in settlement efficiency, liquidity management, and operational resilience in OTC derivatives markets. The integration of demurrage-inspired circulation mechanisms with reputation-based governance offers significant potential for improving financial market infrastructure while maintaining regulatory compatibility.

The manuscript has not been published elsewhere and is not under consideration for publication in any other journal. All authors have approved the manuscript and agree with its submission to the Journal of Financial Market Infrastructures.

We confirm that this work is original and has not been published previously. We also confirm that the manuscript is not being considered for publication elsewhere. All authors have approved the manuscript and agree with its submission.

The implementation code and simulation framework referenced in this paper are available in the public GitHub repository: <https://github.com/Dylanthoma5667/spiralblockchain> (Naressi, 2026)

We believe this paper makes a significant contribution to the field of financial market infrastructure and would be of interest to the readers of your journal. We look forward to your response.

Sincerely,

Fabian Leo Naressi Senemosia Punto Zero framework, QCD simulation viale della Stazione 3c Budoia 33070 Pordenone Italia senemosiapuntozero@gmail.com +393534659633
